DIGITAL LITERACY – PROJECT REPORT

Name : Aqil Mohammed P

Reg No : 25BEC10024

Branch : Electronics and Communication Engineering

Introduction

This project is based on the role of a Student Digital Ambassador, where the aim is to help fellow students understand and navigate the digital world safely and effectively. As described in the VIT Bhopal University Digital Literacy course, the project focuses on building awareness about essential online skills such as creating a professional digital presence, using online platforms, and maintaining safe internet practices.

Through different tasks, this project combines practical learning with real-life applications, including creating a digital portfolio, exploring collaboration tools, and understanding cybercrime prevention. It not only improves technical knowledge but also encourages responsible and ethical online behavior. Overall, this project helps students develop important digital skills that are necessary for academic growth, career opportunities, and staying safe in today's digital environment.

Digital Literacy Task 1 Project Report

Task 1 Write-up: Digital Literacy Awareness Infographic

For the first task of the Digital Literacy portfolio, I took on the role of a Student Digital Ambassador to create a visual resource for my peers. I designed a single-page infographic using Canva, as it provided a versatile range, of templates and icons suitable for academic presentations. My design focuses on three core pillars of the digital world: a clear definition of digital literacy, a checklist for safe internet practices, and essential email etiquette for university students.

The infographic defines digital literacy not just as technical skill, but as the ability to find, evaluate, and communicate information responsibly. In the safety. section, I highlighted actionable tips like guarding UPI PINs and using the National Cyber Crime Helpline. The final section outlines the anatomy of a professional email, emphasizing the importance of clear subject lines and appropriate salutations.

One thing I found particularly interesting while making this design was the "Information Architecture" aspect—deciding how to balance icons with, text so the slide remained scannable. Distilling complex safety protocols into short, impactful sentences was a challenge, but it helped me understand how to communicate high-stakes technical information to a non-technical audience effectively.

Digital Litracy Task 2 Project Report

In this task, I created my student digital portfolio using GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence and showcasing skills, projects, and academic progress. GitHub is a platform used by developers to store and manage their projects using repositories. I created my GitHub profile and added a profile README that includes my name, branch, year, and a short description of my learning goals. I plan to upload my coding projects, assignments, and project work on GitHub so that it can act as my technical portfolio.

LinkedIn is a professional networking platform that helps students connect with professionals, teachers, and companies. I updated my LinkedIn profile by adding my education details, institute name, degree, and expected graduation year. In the future, I will use LinkedIn to connect with professionals, join technical communities, and apply for internships and job opportunities.

Kaggle is a platform used for data science and machine learning practice. It provides datasets, competitions, and notebooks which help students improve their practical skills. Over the next four years, I plan to practice data analysis and machine learning on Kaggle and participate in beginner competitions.

Creating these platforms helped me understand the importance of digital presence, and I will continue to update my profiles regularly to build a strong digital portfolio for my career.

Digital Literacy Task 3 Project Report

In this task, I explored both coding practice platforms and cloud-based collaboration tools, which are essential for students in today's digital learning environment. For the coding practice section, I created an account on HackerRank and attempted a beginner-level problem titled "Solve Me First." This platform is designed to help students improve their programming and logical thinking skills through structured challenges. While solving the problem, I understood how important it is to break down a problem into smaller steps and write efficient code. The instant feedback system on HackerRank helped me identify errors and improve my solution, which made the learning process more interactive and effective.

For the collaboration section, I used Google Forms to create a "Digital Literacy Awareness Quiz" consisting of five questions, including both multiple-choice and short-answer types. This helped me understand how online forms can be used to collect information in an organized way. I also explored how responses are automatically recorded in Google Sheets, making it easy to analyze data and view results in real time.

These tools will be extremely useful in my academic journey. Coding platforms like HackerRank will help me regularly practice programming, improve problem-solving skills, and prepare for technical interviews. On the other hand, tools like Google Forms and Sheets will help me in conducting surveys, collecting feedback, and collaborating efficiently with classmates and teachers. Overall, this task gave me practical exposure to important digital platforms that will support both my academic and professional growth.

Digital Literacy Task 4 Project Report

In this task, I gained a clear understanding of how to communicate professionally through email and the importance of maintaining proper digital etiquette. I drafted two formal emails—one addressed to a professor requesting an extension for an assignment, and another to an internship coordinator expressing interest in a summer internship opportunity. While writing these emails, I focused on key elements such as a clear and relevant subject line, a respectful greeting, a well-structured body paragraph, and a formal closing with my details. I learned that professional emails should be concise, polite, and free from grammatical errors, as they reflect the sender's attitude and seriousness.

Additionally, I created a Social Media Do's and Don'ts checklist to encourage responsible online behavior among students. This activity helped me understand how online actions can impact one's digital reputation.

A situation where poor digital communication can cause problems is when a student sends an email using informal language, slang, or without proper structure to a professor or employer. This may lead to misunderstanding or create a negative impression. Such situations can be avoided by following email etiquette, proofreading messages, and maintaining a respectful tone. Overall, this task helped me realize the importance of clear, professional, and responsible communication in both academic and professional environments.

Digital Litracy Task 5 Project Report

In this task, I explored the topic of cybercrime and understood how digital threats can affect individuals, especially students. I chose to study phishing, which is one of the most common types of cybercrime. Phishing usually occurs when attackers send fake emails, messages, or links that appear to be from trusted sources such as banks, social media platforms, or educational institutions. These messages often create a sense of urgency and trick users into clicking malicious links and entering sensitive information like passwords, OTPs, or bank details.

While researching this topic, I was surprised by how easily people can fall victim to such scams due to lack of awareness. Even a small mistake, such as clicking on an unknown link, can lead to serious consequences like financial loss or identity theft. I also learned that students are common targets because they frequently use online platforms and may not always verify the authenticity of messages.

This task made me more cautious about my online activities. One important habit I will change is that I will always verify links and sender details before clicking or sharing any personal information. I will also avoid using public Wi-Fi for sensitive transactions and enable two-factor authentication on my accounts. Overall, this task increased my awareness about cyber safety and the importance of responsible digital behavior.

Conclusion

This Digital Literacy project has been a very useful and informative learning experience for me. Through this project, I understood that digital literacy is not only about using computers and the internet, but also about using digital tools in a safe, responsible, and professional manner. In Task 1, I created an infographic and learned how to present information in a visual and easy-to-understand format. In Task 2, I created my digital portfolio on platforms like GitHub and LinkedIn, which helped me understand the importance of building a professional online presence from the first year itself. In Task 3, I explored coding platforms and collaboration tools such as HackerRank and Google Forms, which helped me improve my technical and data management skills. In Task 4, I learned how to write professional emails and understood the importance of proper email etiquette and responsible social media behavior. In Task 5, I researched cybercrime and learned about online threats and safety measures to protect personal and financial information.

Overall, this project helped me develop important digital skills such as online communication, professional profile building, basic coding practice, online collaboration, and cyber safety awareness. These skills will help me in my academic journey as well as in my future career. This project also helped me become more confident and responsible while using digital platforms. I will continue to use these platforms and follow safe digital practices in the future.
